What to Do If Your Term Life Insurance Policy Is About to Expire

One advantage of term life insurance is that it is generally the most cost-effective way to achieve the maximum life insurance protection you can afford. Many people first purchase term life

insurance to protect their family's financial interests after a significant life event, such as getting married or the birth of a child.

You may have done the same for your family when you purchased your policy years ago. And chances are, other than paying the premiums, you probably haven't given it much thought since then. However, if your term life insurance policy is set to expire in the near future, it's important to explore your options now before the coverage runs out.

Before you get started, you first need to reevaluate your life insurance needs and determine if anything has changed. Are your children grown and have they graduated from college? Do you have a mortgage? If you have financial obligations that you need to take care of, you may still need term life insurance. If you are nearing retirement and have fewer financial obligations than you did when you were younger, your need for a term life insurance policy may not be as great as it once was.

Purchasing a new policy

If you are in relatively good health and your current term life insurance policy is about to run out, you might consider purchasing a new term policy altogether. When applying for a new term life insurance policy, you will generally need to pass a medical exam. In addition, since you are older now, your premiums may be higher than they were under your old policy. However, you may not need as large a policy as you did when you first purchased term life insurance years ago. It may pay to shop around and compare because premiums can vary among insurers.

Renewing your existing policy

When the coverage period for your term life insurance ends, you may have the option to renew the policy, depending on the specific

policy and limitations. Though you won't be required to take a medical exam if you renew your policy, the rate will generally increase each time it is renewed for an additional term because your age has increased (as has the insurance company's risk of paying a death benefit). These increased premium costs can sometimes make renewing a term life insurance policy an expensive way to cover your life insurance needs.

Converting your policy to permanent life insurance

If you have a convertible term life insurance policy, you may be able to convert it to a permanent life insurance policy, such as whole or universal life insurance. Permanent insurance continues throughout your life as long as you pay the premiums. As with term insurance, permanent insurance pays a death benefit to your beneficiary at your death, but it also contains a cash value account funded by your premium dollars. When you convert your policy, you won't need to prove your insurability by taking a medical exam. However, there is usually a conversion deadline, which is the date by which you must convert, typically before your term life insurance is set to expire.

The cost and availability of life insurance depend on factors such as age, health, and the type and amount of insurance purchased. As with most financial decisions, there are expenses associated with the purchase of life insurance. Policies commonly have mortality and expense charges. In addition, if a policy is surrendered prematurely, there may be surrender charges and income tax implications. Any guarantees are contingent on the claims-paying ability and financial strength of the issuing company.

The rules governing 1035 exchanges are complex and you may incur surrender charges from your "old" life insurance policy. In addition, you may be subject to new sales and surrender charges for the new policy.

Do You Plan to Work in Retirement?

The 2018 Retirement Confidence Survey found that more than two-thirds of all workers surveyed expect that paid work will play a role as a source of retirement income. If you believe that working for pay will supplement at least some of your retirement income, consider the following facts.

1

More people are working beyond age 65

According to the Bureau of Labor Statistics, 37% of men and 28% of women between the ages of 65 and 69 were still in the workforce in 2017. In addition, 17% of men and 10% of women age 70 and older were still working.

2

Social Security imposes an "earnings limit"

If you plan to work and claim Social Security benefits before reaching your full retirement age (66 to 67, depending on year and month of birth), you will be subject to an earnings limit (\$17,040 in 2018). Above that limit, \$1 will be withheld from your benefit for every \$2 earned. In the year you reach full retirement age, you will lose \$1 for every \$3 earned above a higher limit (\$45,360 in 2018). Once you reach full retirement age, there is no reduction in benefits.

3

Income for older workers is on the rise

According to the U.S. Census Bureau, the average earnings for workers age 65 and older increased by 47.6% between 2000 and 2015, a far greater increase than that of any other age group.

Take Charge of Your Student Debt Repayment Plan

If you have federal student loans, you aren't automatically eligible for an income-driven repayment plan — you have to fill out an application (and reapply each year).

Outstanding student loan debt in the United States has tripled over the last decade, surpassing both auto and credit card debt to take second place behind housing debt as the most common type of household debt.¹ Today, more than 44 million Americans collectively owe more than \$1.4 trillion in student debt.² Here are some strategies to pay it off.

Look to your employer for help

The first place to look for help is your employer. While only about 4% of employers offer student debt assistance as an employee benefit, it's predicted that more employers will offer this benefit in the future to attract and retain talent.

Many employers are targeting a student debt assistance benefit of \$100 per month.³ That doesn't sound like much, but it adds up. For example, an employee with \$31,000 in student loans who is paying them off over 10 years at a 6% interest rate would save about \$3,000 in interest and get out of debt two and a half years faster.

Understand all your repayment options

Unfortunately, your student loans aren't going away. But you might be able to choose a repayment option that works best for you. The repayment options available to you will depend on whether you have federal or private student loans. Generally, the federal government offers a broader array of repayment options than private lenders. The following payment options are for federal student loans. (If you have private loans, check with your lender to see which options are available.)

Standard plan: You pay a certain amount each month over a 10-year term. If your interest rate is fixed, you'll pay a fixed amount each month; if your interest rate is variable, your monthly payment will change from year to year (but it will be the same each month for the 12 months that a certain interest rate is in effect).

Extended plan: You extend the time you have to pay the loan, typically anywhere from 15 to 30 years. Your monthly payment is lower than it would be under a standard plan, but you'll pay more interest over the life of the loan because the repayment period is longer.

Example: You have \$31,000 in student loans with a 6% fixed interest rate. Under a standard plan, your monthly payment would be \$344, and your total payment over the term of the loan would be \$41,300, of which \$10,300 (25%) is interest. Under an extended plan, if the term were increased to 20 years, your monthly payment would be \$222, but your total payment over the term of the loan would be \$53,302, of which \$22,302 (42%) is interest.

Graduated plan: Payments start out low in the early years of the loan, then increase in the later years of the loan. With some graduated repayment plans, the initial lower payment includes both principal and interest, while under other plans the initial lower payment includes interest only.

Income-driven repayment plan: Your monthly payment is based on your income and family size. The federal government offers four income-driven repayment plans for federal student loans only:

- Pay As You Earn (PAYE)
- Revised Pay As You Earn (REPAYE)
- Income-Based Repayment (IBR)
- Income-Contingent Repayment (ICR)

You aren't automatically eligible for these plans; you need to fill out an application (and reapply each year). Depending on the plan, your monthly payment is set between 10% and 20% of your discretionary income, and any remaining loan balance is forgiven at the end of the repayment period (generally 20 or 25 years depending on the plan, but 10 years for borrowers in the Public Service Loan Forgiveness Program). For more information on the nuances of these plans or to apply for an income-driven plan, visit the federal student aid website at studentaid.ed.gov.

Can you refinance?

Yes, but only with a new private loan. (There is a federal consolidation loan, but that is different.) The main reason for trying to refinance your federal and/or private student loans into a new private loan is to obtain a lower interest rate. You'll need to shop around to see what's available.

Caution: If you refinance, your old loans will go away and you will be bound by the terms and conditions of your new private loan. If you had federal student loans, this means you will lose any income-driven repayment options.

Watch out for repayment scams

Beware of scammers contacting you to say that a special federal loan assistance program can permanently reduce your monthly payments and is available for an initial fee or ongoing monthly payments. There is no fee to apply for any federal repayment plan.

What are the new rules for 401(k) hardship withdrawals?

The Bipartisan Budget Act passed in early 2018 relaxed some of the rules governing hardship withdrawals from 401(k)s and similar plans. Not all plans offer hardship withdrawals, but the ones that do will be required to comply for plan years beginning in 2019.

In order to take a hardship withdrawal from a 401(k) or similar plan, a plan participant must demonstrate an "immediate and heavy financial need," as defined by the IRS. (For details, visit the IRS website and search for Retirement Topics - Hardship Distributions.) The amount of the withdrawal cannot exceed the amount necessary to satisfy the need, including any taxes due.¹

Current (pre-2019) rules

To determine if a hardship withdrawal is qualified, an employer may rely on an employee's written statement that the need cannot be met using other financial resources (e.g., insurance, liquidation of other assets, commercial loans). In many cases, an employee may also be required to take a plan loan first.

Withdrawal proceeds can generally come only from the participant's own elective deferrals, as well as nonelective (i.e., profit-sharing) contributions, regular matching contributions, and possibly certain pre-1989 amounts.

Finally, individuals who take a hardship withdrawal are prohibited from making contributions to the plan — and therefore receiving any related matching contributions — for six months.

New rules

For plan years beginning after December 31, 2018, the following changes will take effect:

1. Participants will no longer be required to exhaust plan loan options first.
2. Withdrawal amounts can also come from earnings on participant deferrals, as well as qualified nonelective and matching contributions and earnings.
3. Participants will no longer be barred from contributing to the plan for six months.

¹ Hardship withdrawals are subject to regular income tax and a possible 10% early-distribution penalty tax.

Should I enroll in a health savings account?

A health savings account (HSA) is a tax-advantaged account that you can establish and contribute to if you are enrolled in a high-deductible health plan (HDHP). Because you shoulder a greater portion of your health-care costs, you'll usually pay a much lower premium for an HDHP than you would pay for traditional health insurance. This allows you to contribute the premium dollars you're saving to your HSA. Then, when you need medical care, you can withdraw HSA funds to cover your expenses, or opt to pay your costs out-of-pocket if you want to save your account funds. An HSA can be a powerful savings tool, especially if your health expenses are relatively low, since you may be able to build up a significant balance in your HSA over time. Before you enroll in an HSA, ask yourself the following questions:

What will your annual out-of-pocket costs be under the HDHP you're considering? Estimate these based on your current health expenses. The lower your costs, the easier it may be to accumulate HSA funds.

How much can you afford to contribute to your HSA every year? Contributing as much as you

can on a regular basis is key to building a cushion against future expenses. For 2018, you can contribute up to \$3,450 for individual coverage and \$6,900 for family coverage.

Will your employer contribute to your HSA? Employer contributions can help offset the increased financial risk that you're assuming by enrolling in an HDHP rather than traditional employer-sponsored health insurance.

Are you willing to take on more responsibility for your own health care? For example, to achieve the maximum cost savings, you may need to research costs and negotiate fees with health providers when paying out-of-pocket.

How does the coverage provided by the HDHP compare with your current health plan? Don't sacrifice coverage to save money. Read all plan materials to make sure you understand benefits, exclusions, and all costs.

What tax savings might you expect? HSA funds can be withdrawn free of federal income tax and penalties provided the money is spent on qualified health-care expenses. Depending on the state, HSA contributions and earnings may or may not be subject to state taxes. Consult your tax adviser for more information.
