Wealth Management

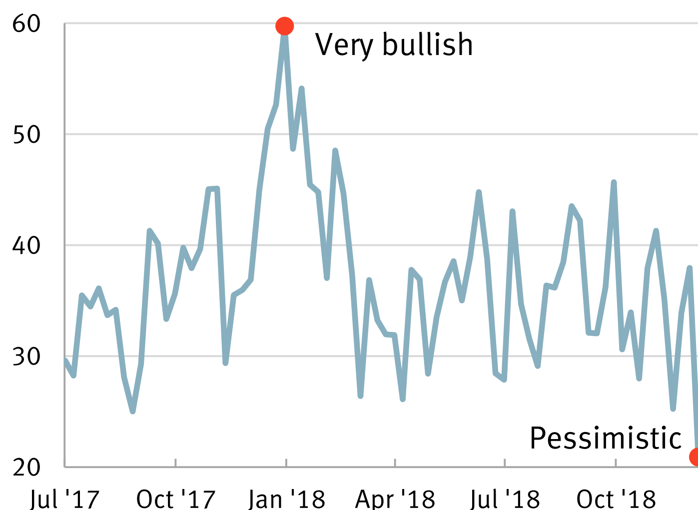
Coping with the correction

While the correction has frayed investors' nerves and could persist, we don't think it's heralding the demise of the bull market. The U.S. economy remains in gear, and with valuations nearing a sweet spot we remain comfortable holding a Market Weight position in equities.

The U.S. stock market has been in a correction since early October, joining many of its global peers that had been weak months before that. The major U.S. averages have given up 12% to 13% from their peak levels so far. There have been bouts of heavy selling followed by rallies, but prices have not yet reached down to levels that have attracted sustained new buying. We think that point is getting close, but the road from here to there could still be a rough one.

Bullish sentiment has plunged

American Association of Individual Investors (AAII) U.S. Investor Sentiment Bullish Readings



Source - RBC Wealth Management, AAII, Bloomberg; weekly data through 12/13/18

As investors look to 2019 and beyond, the underpinnings that gave them such confidence—big fiscal spending budgeted for 2018 and 2019, corporate and personal tax cuts, and upbeat management guidance—now have given way to concerns about the impact of Fed tightening on the 2020 economy and earnings. And as usual there's a long list of challenges close at hand, including: a potential partial U.S. government shutdown, the U.S.-China trade confrontation, difficult political crosscurrents in Washington, parliamentary chaos in Britain around Brexit, fractious politics throughout the EU, heightened tensions between Ukraine and Russia, and weak crude oil markets.

Still in gear

As concerns mount among investors, fear can take hold and push share prices and the broad averages down a long way in a short time. Some sort of convulsive drop cannot be ruled out.

That said, we regard this as a correction and not something more; we think the market advance that began in 2009 has further to run. Our principal reason for holding this view is that the U.S. economic expansion remains in gear, as do those of most important economies. The overt tightening of credit conditions and deterioration in the labor market that would tell you a recession is on the way are not yet in evidence.

Our forecast for 2019 U.S. GDP growth is at 2.5%, with most quarterly postings expected to be in the low "2s." That would be markedly slower than the "tax-cut-juiced" quarterly readings delivered in Q2 and Q3 of this year.

All values in U.S. dollars and priced as of December 17, 2018, market close, unless otherwise noted.

For important disclosures, see page 3.

Quarterly GDP growth rates that subside back toward the 2.2% lower-than-average rate that prevailed from the end of the recession in 2009 until the beginning of this year should keep inflation tamed, in our view. This, in turn, should permit the Fed, once it puts the expected December rate hike in place, to stay on hold through much of next year.

Without more aggressive credit tightening, we expect the U.S. economy will keep on growing through 2019 and into 2020. So, too, should corporate profits and the value of businesses.

Major economic indicators still in expansion mode

Fear factor

But before a market advance to what we expect will be new high ground can get underway, this current correction has to run its course. On that front, several measures of momentum and participation are at or approaching deeply oversold levels. Fewer than 25% of stocks in the S&P 500 are registering upward weekly price momentum. On a daily basis only 16% are giving positive readings. Both of these can go lower still, but sustainable rallies have often begun from such levels.

Optimism and complacency have given way to pessimism and some fear. The most recent U.S. survey of individual investors by AAII showed that only 21% of respondents rated themselves as "bullish" about the market's prospects for the next six months. Near the January peak, fully 60% put themselves in that category. In early October the reading was 46%. The percentage of those characterizing themselves as "bearish" has risen to almost 50%, the highest level since early 2016. Extremes of pessimism are usually unsustainable, suggesting a market low may not be far away, at least in time.

Searching for the sweet spot

Valuations are becoming more compelling. At the peak in February and again in September, the S&P 500 was flirting with a price-to-earnings (P/E) ratio of 20x based on trailing 12-month earnings. These are levels from which annual gains tend to be in the low single digits, on average, and sometimes negative. At today's levels the P/E multiple is a fraction below 16x. The range of 14x to 16x current earnings has historically been something of a "sweet spot" for stocks, with the S&P 500 typically delivering all-in returns close to 15% one year out, on average.

Multiples elsewhere are even lower. Canada's TSX, for example, is trading at a 15% multiple discount to the S&P, an unusually wide disparity. The MSCI Emerging Markets Index and MSCI World ex USA Index are both trading well below their 10-year averages.

We expect corporate earnings to grow moderately in major markets in 2019. The U.S. growth rate should decelerate the most, mainly because the outsized, positive year-over-year impact of corporate tax cuts will no longer be contributing. Slower economic momentum should also rein in profit growth. We anticipate S&P 500 earnings will rise in the mid-to-high single-digit range for the coming year—admittedly a slower pace than 2018, but enough to support modest price gains, in our assessment.

Recognizing resilience

If a major market peak is occurring, it is not conforming with history. None of our major recession indicators are flashing red, let alone yellow. We remain comfortable holding a Market Weight position in overall equity exposure in global portfolios and in U.S. equities—in other words, investing at the long-term strategic allocation level. The U.S. economy and earnings should provide support for modest gains in major indexes in 2019. We think the market has the capacity to absorb economic cooling, ongoing tariff risks, political headwinds, and monetary policy uncertainty, albeit with volatility.

No part of the compensation of the responsible analyst(s) named herein is, or will be, directly or indirectly, related to the specific recommendations or views expressed by the responsible analyst(s) in this report.

Important Disclosures

In the U.S., RBC Wealth Management operates as a division of RBC Capital Markets, LLC. In Canada, RBC Wealth Management includes, without limitation, RBC Dominion Securities Inc., which is a foreign affiliate of RBC Capital Markets, LLC. This report has been prepared by RBC Capital Markets, LLC. which is an indirect wholly-owned subsidiary of the Royal Bank of Canada and, as such, is a related issuer of Royal Bank of Canada.

Non-U.S. Analyst Disclosure: Jim Allworth, an employee of RBC Wealth Management USA's foreign affiliate RBC Dominion Securities Inc.; contributed to the preparation of this publication. This individual is not registered with or qualified as a research analyst with the U.S. Financial Industry Regulatory Authority ("FINRA") and, since he is not an associated person of RBC Wealth Management, he may not be subject to FINRA Rule 2241 governing communications with subject companies, the making of public appearances, and the trading of securities in accounts held by research analysts.

In the event that this is a compendium report (covers six or more companies), RBC Wealth Management may choose to provide important disclosure information by reference. To access current disclosures, clients should refer to https://www.rbccm.com/GLDisclosure/PublicWeb/DisclosureLookup.aspx?EntityID=2 to view disclosures regarding RBC Wealth Management and its affiliated firms. Such information is also available upon request to RBC Wealth Management Publishing, 60 South Sixth St, Minneapolis, MN 55402.

References to a Recommended List in the recommendation history chart may include one or more recommended lists or model portfolios maintained by RBC Wealth Management or one of its affiliates. RBC Wealth Management recommended lists include the Guided Portfolio: Prime Income (RL 6), the Guided Portfolio: Dividend Growth (RL 8), the Guided Portfolio: ADR (RL 10), and the Guided Portfolio: All Cap Growth (RL 12), and former lists called the Guided Portfolio: Large Cap (RL 7), the Guided Portfolio: Midcap 111 (RL 9), and the Guided Portfolio: Global Equity (U.S.) (RL 11). RBC Capital Markets recommended lists include the Strategy Focus List and the Fundamental Equity Weightings (FEW) portfolios. The abbreviation 'RL On' means the date a security was placed on a Recommended List. The abbreviation 'RL Off' means the date a security was removed from a Recommended List.

Distribution of Ratings

For the purpose of ratings distributions, regulatory rules require member firms to assign ratings to one of three rating categories - Buy, Hold/Neutral, or Sell - regardless of a firm's own rating categories. Although RBC Capital Markets, LLC ratings of Top Pick/Outperform, Sector Perform, and Underperform most closely correspond to Buy, Hold/Neutral and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis.

Distribution of Ratings - RBC Capital Markets, LLC Equity Research
As of September 30, 2018

			Investment Banking Services Provided During Past 12 Months	
Rating	Count	Percent	Count	Percent
Buy [Top Pick & Outperform]	859	54.33	251	29.22
Hold [Sector Perform]	646	40.86	125	19.35
Sell [Underperform]	76	4.81	5	6.58

Explanation of RBC Capital Markets, LLC Equity Rating System

An analyst's "sector" is the universe of companies for which the analyst provides research coverage. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12 months relative to the analyst's sector average.

Ratings:

Top Pick (TP): Represents analyst's best idea in the sector; expected to provide significant absolute total return over 12 months with a favorable risk-reward ratio. **Outperform (O):** Expected to materially outperform sector average over 12 months. **Sector Perform (SP):** Returns expected to be in line with sector average over 12 months. Underperform (U): Returns expected to be materially below sector average over 12 months. **Restricted (R):** RBC policy precludes certain types of communications, including an investment recommendation, when RBC is acting as an advisor in certain merger or other strategic transactions and in certain other circumstances. **Not Rated (NR):** The rating, price targets and estimates have been removed due to applicable legal, regulatory or policy constraints which may include when RBC Capital Markets is acting in an advisory capacity involving the company.

Risk Rating:

The **Speculative** risk rating reflects a security's lower level of financial or operating predictability, illiquid share trading volumes, high balance sheet leverage, or limited operating history that result in a higher expectation of financial and/or stock price volatility.

Valuation and Risks to Rating and Price Target

When RBC Wealth Management assigns a value to a company in a research report, FINRA Rules and NYSE Rules (as incorporated into the FINRA Rulebook) require that the basis for the valuation and the impediments to obtaining that valuation be described. Where applicable, this information is included in the text of our research in the sections entitled "Valuation" and "Risks to Rating and Price Target", respectively.

The analyst(s) responsible for preparing this research report received compensation that is based upon various factors,

including total revenues of RBC Capital Markets, LLC, and its affiliates, a portion of which are or have been generated by investment banking activities of the member companies of RBC Capital Markets, LLC and its affiliates.

Other Disclosures
