Do Millennials Need Life Insurance?

The financial challenges millennials face can be overwhelming. Many young adults have to figure out how to pay off college loans, save to buy a home or start a family, and sock away money for retirement. Given these hurdles, it's no wonder that life insurance as a financial asset gets little to no attention. But it should. There are many reasons to have life insurance at a relatively young age, but here are some common ones.

Leaving your debts for others to pay

As a young adult, you become more independent and self-sufficient. While you no longer depend on others for your financial well-being, your death might still create a financial hardship for those you leave behind.

You may have debts such as a mortgage or student loans that are jointly held with another person. Or you may be paying your parents for loans they took out (e.g., PLUS loans) to help pay for your education. Your untimely death would leave others responsible for some or all of these debts. You might consider purchasing enough life insurance to cover your financial obligations so others don't have to.

Funeral expenses can also be a burden for those you leave behind. Life insurance could ease the financial burden of paying for your uninsured medical bills (if any) and for costs associated with your funeral and burial.

It's less expensive

Premiums for life insurance are based on many factors, including age and health. Certainly, the younger and presumably healthier you are, the less your coverage will cost. This is especially true if you are at a high risk for developing a medical condition later in life.

Replacing lost income

Someone may be relying on your income for financial support. For instance, you may be providing for a family member such as a parent, grandparent, or sibling. In each of these instances, how would your income be replaced if you died? The death benefit from life insurance can help replace your income after you're gone.

Providing for your family

As your family grows, so do your financial responsibilities. There is likely a hefty mortgage to pay. And there are costs associated with young children. If you died without life insurance, how would the mortgage get paid? Could your surviving spouse or partner cover the costs of day care and housekeeping?

And there are events you should plan for now that won't happen until several years in the future. Maybe you'll begin saving for your kids' college education while trying to save as much as you can for your retirement. Over the next several decades, think about how much you could set aside for these expenses. If you are no longer around to make these contributions, life insurance can help fund these future accumulations.

Work coverage may not be enough

You may have a job with an employer that sponsors group life insurance. Hopefully, you take advantage of that program, but is it enough coverage to meet your needs now and in the future? Your insurance needs may change with time, although your employer's coverage may not. Also, most employer-sponsored life insurance programs are effective only while you remain an employee. If you change jobs or are unable to work due to illness or disability, you may lose your employer's coverage. That's why it's a good idea to consider buying your own life insurance.

The cost and availability of life insurance depend on factors such as age, health, and the type and amount of insurance purchased. As with most financial decisions, there are expenses associated with the purchase of life insurance. Policies commonly have mortality and expense charges. In addition, if a policy is surrendered prematurely, there may be surrender charges and income tax implications.

Social Security: Shoring Up America's Safety Net

Future projections

In 2019, the trustees of Social Security reported that the Old-Age and Survivors Insurance (OASI) trust fund is projected to run out in 2034. At that time, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ever since a legal secretary named Ida May Fuller received the first Social Security retirement check in 1940, Americans have been counting on Social Security to provide much-needed retirement income. For many older Americans, Social Security is their main source of guaranteed retirement income — income that continues throughout their lifetimes and is indexed for inflation every year (in 2019, the cost-of-living adjustment, or COLA, was 2.8%).

Social Security provides more than just retirement income, though. It also provides disability and survivor insurance benefits. About 62 million people — more than one in six U.S. residents — collected some type of Social Security benefit in 2018, with approximately 80% of these recipients receiving Social Security retirement or survivor benefits.[1]

How Social Security works

Social Security is a pay-as-you-go system, which means that payments from current workers (in the form of payroll taxes) fund benefits for current beneficiaries. The payroll tax rate for Social Security is 12.4%, with 6.2% paid by the employee and 6.2% paid by the employer (self-employed individuals pay the entire 12.4%). These payroll taxes are deposited into the Old-Age and Survivors Insurance (OASI) trust fund (for retirement and survivor benefits) and the Disability Insurance (DI) trust fund (for disability payments).

Because of demographic and economic factors, including higher retirement rates and lower birth rates, there will be fewer workers per beneficiary over the long term, worsening the strain on the trust funds. This year, the trustees of Social Security reported that the OASI trust fund is projected to run out in 2034. After that, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ideas for reform

There has been little national consensus by policymakers on how to deal with Social Security's looming demographic challenges. Meaningful reform will require broad bipartisan support, and the trustees have urged Congress to address Social Security's challenges sooner rather than later, so that solutions will be less drastic and can be implemented gradually, lessening the impact on the public.

Some Social Security reform proposals on the table include:

- Raising the current Social Security payroll tax rate — according to the 2019 trustees report, an immediate and permanent payroll tax increase to 15.1% (up from the current 12.4%) would be necessary to address the long-range revenue shortfall (16.05% if the increase started in 2035)
- Raising or eliminating the ceiling on wages currently subject to Social Security payroll taxes ($132,900 in 2019)
- Raising the full retirement age beyond the currently scheduled age of 67 (for anyone born in 1960 or later)
- Reducing future benefits — to address the long-term revenue shortfall, the trustees have noted that scheduled benefits would have to be immediately and permanently reduced by about 17% for all current and future beneficiaries, or by approximately 20% if reductions were applied only to those who initially become eligible for benefits in 2019 or later
- Changing the formula that is used to calculate benefits
- Changing the formula that is used to calculate the annual cost-of-living adjustment for benefits

Understand your retirement benefits

The amount you'll receive from Social Security is based on the number of years you've worked, the amount you've earned over your lifetime, and the age when you file for benefits. Your benefit is calculated using a formula that takes into account your 35 highest earnings years, but you don't need to work for that long to qualify for retirement benefits. Generally, you need to have earned a minimum of 40 work credits, which is about 10 years of work in a job covered by Social Security. If you haven't worked long enough to qualify on your own, you may qualify for spousal benefits based on your spouse's work record. A spousal benefit claimed at your full retirement age is generally equal to 50% of the primary worker's full benefit.

You can get an estimate of your future Social Security retirement benefits by visiting the Social Security website at ssa.gov and using the Retirement Estimator tool or by viewing your Social Security Statement. Your personalized statement contains a detailed record of your earnings history, as well as estimates of the retirement, survivor, and disability benefits you can expect at different ages. To view your statement online, you'll first need to register. If you haven't registered online, you'll receive your Social Security Statement in the mail every year if you are age 60 or older and not yet receiving benefits.

Five Retirement Lessons from Today's Retirees

EBRI consistently finds that setting a savings goal increases the level of confidence among today's workers. Despite that fact, just 42% of survey respondents have tried to determine a total retirement savings goal, and less than one-third have tried to calculate how much they may need for medical expenses. Of those who have calculated a total savings goal, 34% have found they will need $1 million or more to retire comfortably.

Source: 2019 Retirement Confidence Survey, EBRI

Each year for its Retirement Confidence Survey, the Employee Benefit Research Institute (EBRI) surveys 1,000 workers and 1,000 retirees to assess how confident they are in their ability to afford a comfortable retirement. Once again, in 2019, retirees expressed stronger confidence than workers: 82% of retirees reported feeling "very" or "somewhat" confident, compared with 67% of workers. A closer look at some of the survey results reveals various lessons today's workers can learn from current retirees.

Current sources of retiree income

Let's start with a breakdown of the percentage of retirees who said the following resources provide at least a minor source of income:

- Social Security: 88%
- Personal savings and investments: 69%
- Defined benefit/traditional pension plan: 64%
- Individual retirement account: 61%
- Workplace retirement savings plan: 54%
- Product that guarantees monthly income: 33%
- Work for pay: 25%

Lesson 1: Don't count on work-related earnings

Perhaps the most striking percentage is the last one, given that 74% of today's workers expect work-related earnings to be at least a minor source of income in retirement. Currently, just one in four retirees works for pay.

Lesson 2: Have realistic expectations for retirement age

Building upon Lesson 1, it may benefit workers to proceed with caution when estimating their retirement age, as the Retirement Confidence Survey consistently finds a big gap between workers' expectations and retirees' actual retirement age.

In 2019, the gap is three years: Workers said they expect to retire at the median age of 65, whereas retirees said they retired at a median age of 62. Three years can make a big difference when it comes to figuring out how much workers need to accumulate by their first year of retirement. Moreover, 34% of workers reported that they plan to retire at age 70 or older (or not at all), while just 6% of current retirees fell into this category. In fact, almost 40% of retirees said they retired before age 60. The reality is that more than four in 10 retirees retired earlier than planned, often due to a health issue or change in their organizations.

Estimating retirement age is one area where workers may want to hope for the best but prepare for the worst.

Lesson 3: Income is largely a result of individual savings efforts

Even though 64% of current retirees have defined benefit or pension plans, an even larger percentage say they rely on current savings and investments, and more than half rely on income from IRAs and/or workplace plans. Current workers are much less likely to have defined benefit or pension plans, so it is even more important that they focus on their own savings efforts.

Fortunately, workers appear to be recognizing this fact, as 82% said they expect their workplace retirement savings plan to be a source of income in retirement, with more than half saying they expect employer plans to play a "major" role.

Lesson 4: Some expenses, particularly health care, may be higher than expected

While most retirees said their expenses were "about the same" or "lower than expected," approximately a third said their overall expenses were higher than anticipated. Nearly four out of 10 said health care or dental expenses were higher.

Workers may want to take heed from this data and calculate a savings goal that accounts specifically for health-care expenses. They may also want to familiarize themselves with what Medicare does and does not cover (e.g., dental and vision costs are not covered) and think strategically about a health savings account if they have the opportunity to utilize one at work.

Lesson 5: Keep debt under control

Just 26% of retirees indicated that debt is a problem, while 60% of workers said this is the case for them. Unfortunately, debt can hinder retirement savings success: seven in 10 workers reported that their non-mortgage debt has affected their ability to save for retirement. Also consider that 32% of workers with a major debt problem were not at all confident about having enough money to live comfortably in retirement, compared with just 5% of workers who don't have a debt problem.

As part of their overall financial strategy, workers may want to develop a plan to pay down as much debt as possible prior to retirement.

How much will health care cost?

Retirement health-care costs will vary depending on your health and longevity, but it may help to have a guideline. These are the estimated savings required for an individual or couple who turned 65 in 2019 to have a 90% chance of meeting expenses for Medicare Part B health insurance, Part D prescription drug coverage, Medigap Plan F, and out-of-pocket drug costs, assuming median prescription drug expenses.* These estimates do not include services not covered by Medicare or Medigap.

*Medigap Plan F is used for these estimates because it is the most comprehensive coverage available and simplifies the calculation. However, this plan may not be available for new beneficiaries after January 1, 2020. Current enrollees may keep Plan F, and most other plans will remain available for new enrollees.

Source: Employee Benefit Research Institute, 2019

What health services aren't covered by Medicare?

Original Medicare — Part A hospital insurance and Part B medical insurance — offers broad coverage, but many services are not covered.

Some may be fully or partially covered by a Part C Medicare Advantage Plan, which replaces Original Medicare, or a Medigap policy, which supplements Original Medicare. Both are offered by Medicare-approved private insurers. (You cannot have both a Medicare Advantage Plan and a Medigap policy.)

Whether you are looking forward to Medicare in the future or are already enrolled, you should consider these potential expenses.

Deductibles, copays, and coinsurance. Costs for covered services can add up, and — unlike most private insurance — there is no annual out-of-pocket maximum. Medicare Advantage and Medigap plans may pay all or a percentage of these costs and may include an out-of-pocket maximum.

Prescription drugs. For coverage, you need to enroll in a Part D prescription drug plan or a Medicare Advantage plan that includes drug coverage.

Dental and vision care. Original Medicare does not cover routine dental or vision care. Some Medicare Advantage and Medigap plans may offer coverage for either or both of these needs. You might also consider private dental and/or vision insurance.

Hearing care and hearing aids. Some Medicare Advantage plans may cover hearing aids and exams.

Medical care outside the United States. Original Medicare does not offer coverage outside the United States. Some Medicare Advantage and Medigap plans offer coverage for emergency care abroad. You can also purchase a private travel insurance policy.

Long-term care. Medicare does not cover "custodial care" in a nursing home or home health care. You may be able to purchase long-term care (LTC) insurance from private insurers.

A complete statement of coverage, including exclusions, exceptions, and limitations, is found only in the LTC insurance policy. It should be noted that LTC insurance carriers have the discretion to raise their rates and remove their products from the marketplace.
