Market Strategies: Three Ways to Play Defense in Your Stock Portfolio

Defensive investment strategies share a common goal — to help a portfolio better weather an economic downturn and/or bouts of market volatility. But there are some key differences,

including the specific criteria by which particular stocks are selected. If you are nearing retirement or just have a more conservative risk tolerance, one of these defensive strategies may help you manage risk while maintaining a robust equity portfolio.

Tilt toward value

Growth and value are opposite investment styles that tend to perform differently under different market conditions. Value stocks are associated with companies that appear to be undervalued by the market or are in an out-of-favor industry. These stocks may be priced lower than might be expected in relation to their earnings, assets, or growth potential, but the broader market is expected to eventually recognize the company's full potential.

Established companies are more likely than younger companies to be considered value stocks. These firms may be more conservative with spending and emphasize paying dividends over reinvesting profits. Unlike value stocks, growth stocks may be priced higher in relation to current earnings or assets, so investors are essentially paying a premium for growth potential. This is one reason why growth stocks are typically considered to carry higher risk than value stocks.

Seek dividends

Whereas stock prices are often unpredictable and may be influenced by factors that do not reflect a company's fiscal strength (or weakness), dividend payments tend to be steadier and more directly reflect a company's financial position. Comparing current dividend yields, and a company's history of dividend increases, can be helpful in deciding whether to invest in a stock or stock fund.

The flip side is that dividend-paying stocks may not have as much growth potential as

non-dividend payers, and there are times when dividend stocks may drag down, not boost, portfolio performance. For example, dividend stocks can be sensitive to interest rate changes. When rates rise, the higher yields of lower risk fixed-income investments may become more appealing, placing downward pressure on dividend stocks.

Temper volatility

All stocks are volatile to some degree, but some have been less volatile historically than others. Certain mutual funds and exchange-traded funds (ETFs) labeled "minimum volatility" or "low volatility" are constructed with an eye toward reducing risk during periods of market turbulence.

One commonly used measure of a stock or stock fund's volatility is its beta, which is typically published with other information about an investment. The U.S. stock market as a whole is generally considered to have a beta of 1.0. In theory, an investment with a beta of 0.8 might experience only 80% of losses during a downswing — and thus would have less ground to regain when the market turns upward again.

The return and principal value of all investments fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. Investing in dividends is a long-term commitment. The amount of a company's dividend can fluctuate with earnings, which are influenced by economic, market, and political events. Dividends are typically not guaranteed and could be changed or eliminated. Low-volatility funds vary widely in their objectives and strategies. There is no guarantee that they will maintain a more conservative level of risk, especially during extreme market conditions.

Mutual funds and exchange-traded funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Ten Year-End Tax Tips for 2019

Timing of itemized deductions and the increased standard deduction

Recent tax law changes substantially increased the standard deduction amounts and made significant changes to itemized deductions. It may now be especially useful to bunch itemized deductions in certain years; for example, when they would exceed the standard deduction.

IRA and retirement plan contributions

For 2019, you can contribute up to \$19,000 to a 401(k) plan (\$25,000 if you're age 50 or older) and up to \$6,000 to traditional and Roth IRAs combined (\$7,000 if you're age 50 or older). The window to make 2019 contributions to an employer plan generally closes at the end of the year, while you typically have until the due date of your federal income tax return (not including extensions) to make 2019 IRA contributions.

Here are 10 things to consider as you weigh potential tax moves between now and the end of the year.

1. Set aside time to plan

Effective planning requires that you have a good understanding of your current tax situation, as well as a reasonable estimate of how your circumstances might change next year. There's a real opportunity for tax savings if you'll be paying taxes at a lower rate in one year than in the other. However, the window for most tax-saving moves closes on December 31, so don't procrastinate.

2. Defer income to next year

Consider opportunities to defer income to 2020, particularly if you think you may be in a lower tax bracket then. For example, you may be able to defer a year-end bonus or delay the collection of business debts, rents, and payments for services. Doing so may enable you to postpone payment of tax on the income until next year.

3. Accelerate deductions

You might also look for opportunities to accelerate deductions into the current tax year. If you itemize deductions, making payments for deductible expenses such as medical expenses, qualifying interest, and state taxes before the end of the year (instead of paying them in early 2020) could make a difference on your 2019 return.

4. Factor in the AMT

If you're subject to the alternative minimum tax (AMT), traditional year-end maneuvers such as deferring income and accelerating deductions can have a negative effect. Essentially a separate federal income tax system with its own rates and rules, the AMT effectively disallows a number of itemized deductions. For example, if you're subject to the AMT in 2019, prepaying 2020 state and local taxes probably won't help your 2019 tax situation, but could hurt your 2020 bottom line. Taking the time to determine whether you may be subject to the AMT before you make any year-end moves could help you avoid a costly mistake.

5. Bump up withholding to cover a tax shortfall

If it looks as though you're going to owe federal income tax for the year, especially if you think you may be subject to an estimated tax penalty, consider asking your employer (on Form W-4) to increase your withholding for the remainder of the year to cover the shortfall. The biggest advantage in doing so is that withholding is

considered as having been paid evenly throughout the year instead of when the dollars are actually taken from your paycheck. This strategy can also be used to make up for low or missing quarterly estimated tax payments. With all the recent tax changes, it may be especially important to review your withholding in 2019.

6. Maximize retirement savings

Deductible contributions to a traditional IRA and pre-tax contributions to an employer-sponsored retirement plan such as a 401(k) can reduce your 2019 taxable income. If you haven't already contributed up to the maximum amount allowed, consider doing so by year-end.

7. Take any required distributions

Once you reach age 70½, you generally must start taking required minimum distributions (RMDs) from traditional IRAs and employer-sponsored retirement plans (an exception may apply if you're still working for the employer sponsoring the plan). Take any distributions by the date required — the end of the year for most individuals. The penalty for failing to do so is substantial: 50% of any amount that you failed to distribute as required.

8. Weigh year-end investment moves

You shouldn't let tax considerations drive your investment decisions. However, it's worth considering the tax implications of any year-end investment moves that you make. For example, if you have realized net capital gains from selling securities at a profit, you might avoid being taxed on some or all of those gains by selling losing positions. Any losses over and above the amount of your gains can be used to offset up to \$3,000 of ordinary income (\$1,500 if your filing status is married filing separately) or carried forward to reduce your taxes in future years.

9. Beware the net investment income tax

Don't forget to account for the 3.8% net investment income tax. This additional tax may apply to some or all of your net investment income if your modified adjusted gross income (AGI) exceeds \$200,000 (\$250,000 if married filing jointly, \$125,000 if married filing separately, \$200,000 if head of household).

10. Get help if you need it

There's a lot to think about when it comes to tax planning. That's why it often makes sense to talk to a tax professional who is able to evaluate your situation and help you determine if any year-end moves make sense for you.

Five Retirement Lessons from Today's Retirees

EBRI consistently finds that setting a savings goal increases the level of confidence among today's workers. Despite that fact, just 42% of survey respondents have tried to determine a total retirement savings goal, and less than one-third have tried to calculate how much they may need for medical expenses. Of those who have calculated a total savings goal, 34% have found they will need \$1 million or more to retire comfortably.

Source: 2019 Retirement Confidence Survey, EBRI

Each year for its Retirement Confidence Survey, the Employee Benefit Research Institute (EBRI) surveys 1,000 workers and 1,000 retirees to assess how confident they are in their ability to afford a comfortable retirement. Once again, in 2019, retirees expressed stronger confidence than workers: 82% of retirees reported feeling "very" or "somewhat" confident, compared with 67% of workers. A closer look at some of the survey results reveals various lessons today's workers can learn from current retirees.

Current sources of retiree income

Let's start with a breakdown of the percentage of retirees who said the following resources provide at least a minor source of income:

- Social Security: 88%
- Personal savings and investments: 69%
- Defined benefit/traditional pension plan: 64%
- Individual retirement account: 61%
- Workplace retirement savings plan: 54%
- Product that guarantees monthly income: 33%
- Work for pay: 25%

Lesson 1: Don't count on work-related earnings

Perhaps the most striking percentage is the last one, given that 74% of today's workers expect work-related earnings to be at least a minor source of income in retirement. Currently, just one in four retirees works for pay.

Lesson 2: Have realistic expectations for retirement age

Building upon Lesson 1, it may benefit workers to proceed with caution when estimating their retirement age, as the Retirement Confidence Survey consistently finds a big gap between workers' expectations and retirees' actual retirement age.

In 2019, the gap is three years: Workers said they expect to retire at the median age of 65, whereas retirees said they retired at a median age of 62. Three years can make a big difference when it comes to figuring out how much workers need to accumulate by their first year of retirement. Moreover, 34% of workers reported that they plan to retire at age 70 or older (or not at all), while just 6% of current retirees fell into this category. In fact, almost 40% of retirees said they retired before age 60. The reality is that more than four in 10 retirees retired earlier than planned, often due to a health issue or change in their organizations.

Estimating retirement age is one area where workers may want to hope for the best but prepare for the worst.

Lesson 3: Income is largely a result of individual savings efforts

Even though 64% of current retirees have defined benefit or pension plans, an even larger percentage say they rely on current savings and investments, and more than half rely on income from IRAs and/or workplace plans. Current workers are much less likely to have defined benefit or pension plans, so it is even more important that they focus on their own savings efforts.

Fortunately, workers appear to be recognizing this fact, as 82% said they expect their workplace retirement savings plan to be a source of income in retirement, with more than half saying they expect employer plans to play a "major" role.

Lesson 4: Some expenses, particularly health care, may be higher than expected

While most retirees said their expenses were "about the same" or "lower than expected," approximately a third said their overall expenses were higher than anticipated. Nearly four out of 10 said health care or dental expenses were higher.

Workers may want to take heed from this data and calculate a savings goal that accounts specifically for health-care expenses. They may also want to familiarize themselves with what Medicare does and does not cover (e.g., dental and vision costs are not covered) and think strategically about a health savings account if they have the opportunity to utilize one at work.

Lesson 5: Keep debt under control

Just 26% of retirees indicated that debt is a problem, while 60% of workers said this is the case for them. Unfortunately, debt can hinder retirement savings success: seven in 10 workers reported that their non-mortgage debt has affected their ability to save for retirement. Also consider that 32% of workers with a major debt problem were not at all confident about having enough money to live comfortably in retirement, compared with just 5% of workers who don't have a debt problem.

As part of their overall financial strategy, workers may want to develop a plan to pay down as much debt as possible prior to retirement.

How much will health care cost?

Retirement health-care costs will vary depending on your health and longevity, but it may help to have a guideline. These are the estimated savings required for an individual or couple who turned 65 in 2019 to have a 90% chance of meeting expenses for Medicare Part B health insurance, Part D prescription drug coverage, Medigap Plan F, and out-of-pocket drug costs, assuming median prescription drug expenses.* These estimates do not include services not covered by Medicare or Medigap.

*Medigap Plan F is used for these estimates because it is the most comprehensive coverage available and simplifies the calculation. However, this plan may not be available for new beneficiaries after January 1, 2020. Current enrollees may keep Plan F, and most other plans will remain available for new enrollees.

Should parents "go for broke" on youth sports?

Many parents encourage their kids to play organized sports because they believe the experience will be good for their physical and mental well-being. Athletic participation often provides an opportunity to instill discipline and develop social skills that could have a positive impact on their children's futures.

But kids play has morphed into big business. In 2018, the size of the U.S. youth sports market was estimated to be about \$17 billion.¹

The costs can really add up at more competitive levels, when payments for professional instruction, specialty equipment, and travel kick into high gear. On average, families with children who competed on elite teams spent an average of \$3,167 per player in 2018, up from \$1,976 in 2013.²

Lofty hopes and dreams might inspire some parents to overspend on youth sports. In fact, surveys suggest that many parents are willing to make big financial sacrifices to cover athletic costs, possibly even taking on credit card debt or delaying retirement.³ Unfortunately, some parents may have unrealistic expectations, such as those who are confident their children

will become professional athletes, despite the very long odds against it.

Parents who assume that investing in athletics will pay off with college scholarships are also likely to end up disappointed. Only about 2% of high school athletes benefit from athletic awards, and few of them are "full rides." Coaches often have more roster spots to fill than available scholarships, so many athletes receive partial awards that may cover only a small fraction of tuition costs.⁴

Although most parents have good intentions, there may be some unhealthy side effects. According to a 2016 research study, young athletes whose families devoted a large portion of their household income to sports felt more pressure to succeed and were less likely to enjoy the experience.⁵ And even if their kids love to play, parents should attempt to keep the costs in an affordable range so that other important financial goals (such as saving for college and retirement) are not neglected.
